

## CARE AND CONSERVATION OF ARTWORK

*Any painting is a piece of an artist's soul, an expression of an artist's feelings, hopes and dreams. My paintings are also such.*

*Also, am sure you must have taken this painting with either investment in mind or your love for art or to enhance your décor. Whatever the reason, we have to take proper care of them. Hence, I have put across some necessary information which am sure will benefit you.*

*The four factors that most affect the health of your painting are temperature, humidity, light and dust.*

- 1. Kindly don't expose the paintings to direct sunlight. Avoid putting them outdoors.*
- 2. Kindly don't put the paintings where there is extreme temperature and heavy humidity. Avoid kitchens and bathrooms.*
- 3. While cleaning your paintings, kindly brush it or wipe it carefully with a very clean, soft, dry flat brush or cloth in one direction only. Do not use water or wet cloth on your paintings ever.*

*All my artworks are done on a very superior quality of treated canvas with best quality German paints. They are finished with a thin, protective layer of varnish. They are framed and absolutely ready to be placed. I am sure you will derive as much pleasure from them as I have while making them.*

*Kindly don't hesitate to call me incase of any query or any discussions of artwork in the future.*

*Regards,  
Sharwari Luth.*
